

# Battle Control System Mobile (BCS-M) Remote Radio Secure Voice System (RRSVS) AN/TRC-215 Spiral 3

BCS-M is a low density/high demand (LD/HD) ground-based C2 node that supports the Joint Forces Air Component Commander in theater operations as well as homeland defense missions.

The RRSVS provides ground/air line-of-sight radios, which users manipulate over tactical wideband multi-channel communications systems via remote control. Deploying the RRSVS with tactical radar enables a concept of operations that reduces the required footprint of forward-deployed, ground-based, theater air control elements .
