

## The New GETT Family

The GETT (**G**enerator, **E**CU, **T**ent **T**railer) is an integral sub-system component to the USMC Combat Operations Center program. The GETT system provides dependable export power to the COC along with heating, ventilation and air conditioning for the shelters which make up the COC complex.

The Standard USMC COC GETT – 10Ton ECU with 23kW Generator

Applied Companies recently announced the new **Family of GETTs**, which are based upon the combat proven USMC COC GETT design. “We feel this is a natural direction to head.” said Jack Thousand, VP Programs, “We now offer a GETT Family product line to meet a wide variety of customer C<sup>4</sup>IRS requirements.”

“Our aim is to provide customers Standard Products,” according to LTC (Ret) Skip Williams, Regional Business Director. “By using the standard M1102 Light Tactical Trailer as the GETTs platform base” Williams went on to say, “the customer has a proven TACOM trailer which can be integrated with a 5, 8 or 10 ton Environmental Control Unit (ECU). However, not only does the customer choose the ECU size, they also have the choice of either a 23 or 35kW generator set to support their C<sup>4</sup>IRS systems and application needs.”

The 5 Ton ECU with 23kW Generator equipped with Auxiliary Fuel Tank

“We bring to the GETT Family the proven design of the USMC GETT and the flexibility for customers to mix and match Power and HVAC requirements for their C<sup>4</sup> needs. The good news is that all sub-systems components in this Family have been combat proven.” Jack Thousand added.
